Pavia Systems Discusses the New Wave of Disruptive Technologies at National CEO Tech Forum
George White, CEO of Pavia Systems speaks at BuiltWorld's first ever national CEO Tech Forum

CHICAGO – April 14, 2016 – [Pavia Systems](#), a transportation infrastructure software company, today announced its participation at BuiltWorld's first-ever CEO Tech Forum on April 21, in downtown Chicago. CEO and co-founder, George White, will be a panelist discussing disruptive technologies in the industry, among other CEOs from Paracosm, VR Studios and SkyCatch. Other speakers for the event include professionals from Microsoft, Caterpillar Ventures, Autodesk and more. Disruptive technologies involve an innovation that creates a new market and value network.

George White will discuss the real-time, strategic project inspections through the use of remarkable technologies. Pavia System's [HeadLight](#) tool is an example of transforming the inspection process by providing a central hub to allow owners, owner's representatives, and design-build teams to manage and document risk and communicate progress with stakeholders and funding partners.

The HeadLight tool is a mobile first, integration friendly platform to enable real-time communication and documentation for heavy civil projects. It is designed for state and local road-owning government agencies, consulting engineering firms that offer project inspection services and road-building private contractors that wish to gain easier, more effective, and less-costly ways for their teams to perform on-site project inspections.

"This will be an exciting opportunity to discuss the growing use of disruptive technologies across the industry," said White. "We are thrilled to be a part of *BuiltWorlds* CEO Tech Forum because it fosters great collaboration and continues a meaningful conversation to advance the industry."

The conference will bring together national industry thought leaders and change agents for the ever evolving technology industry. Other topics of discussion at the conference include wearables, robotics, modular construction, apps for safety, reporting, documentation, collaboration, drones, IoT and virtual reality.

About Pavia Systems

Pavia Systems, Inc., founded in 2005, is a software technology company specializing in the transportation infrastructure industry. Their award-winning solutions provide clients with the tools they need to implement their projects electronically. Products include mobile applications for project

inspection, pavement design, and online training. Pavia's customers include large departments of transportation, contractors, equipment manufacturers, and industry related materials companies.
